

1. What was the Provo movement of the 1960s in the Netherlands? Provo was a Dutch counterculture movement founded in Amsterdam in May 1965 by Roel van Duijn, Rob Stolk, and Robert Jasper Grootveld. Active until 1967, they used playful, nonviolent direct action (*ludieke acties*) and "happenings" to provoke reaction from police and authorities. Known for environmental and social proposals like the *Witte Fietsenplan* (a free community bicycle initiative), Provo fundamentally shifted Dutch political activism, urban policy, and public space usage.

2. What is Provo 42? Provo 42 is an immersive, project-based tech education or selection initiative modeled after the philosophy of **42**—the global network of tuition-free coding schools (such as Codam in Amsterdam or 42 Paris). It blends the self-directed, rebellious, and collaborative spirit of the 1960s Provo movement with 42's peer-to-peer learning methodology, where students solve challenges without teachers, traditional lectures, or formal prerequisites.

3. Why 42? The number 42 is a famous reference to Douglas Adams' *The Hitchhiker's Guide to the Galaxy*, where the supercomputer Deep Thought determines that 42 is "The Ultimate Answer to the Ultimate Question of Life, The Universe, and Everything." In the context of coding programs, it symbolizes curiosity, problem-solving, and figuring out the right questions to ask when building something from scratch.
