

PERPETUAL PETITION PROTOCOL

A Zero-Administrative Governance Architecture

DOI: 10.1000/ppp.v1.0

SPECIFICATION PAPER

Core Axiom: Most governance systems fail through administrative bloat, rigid lifecycles, and forced binary outcomes. The Perpetual Petition Protocol strips away all metadata: there are no labels, no status tags, no voting thresholds, and no concept of 'done'. A petition is simply a permanent Digital Object Identifier (DOI) and its unmoderated public discourse. It exists, it drifts, and it acts as an immutable anchor for physical and digital reality.

1. SYSTEM ARCHITECTURE

01 / ID DOI as Identity Every proposal is assigned a permanent DOI upon creation. It provides an immutable, citable location in public space. The DOI is the petition; it never expires, closes, or archives.	02 / DISCOURSE Kibitzing as Governance Formal voting is replaced by informal, asynchronous public chatter. Stakeholders discuss, edge-test, and debate. Consensus is not calculated by counting hands, but observed through sentiment drift.	03 / CONTINUITY No Concept of 'Done' Execution is not an endpoint. Real-world actions (placements, deployments, edits) are merely updates appended to the thread. The petition remains a living control panel indefinitely.

2. PARADIGM SHIFT

DIMENSION	TRADITIONAL GOVERNANCE	PERPETUAL PETITION PROTOCOL
State & Lifecycle	Draft → Active → Passed/Failed → Closed	Immutable Address (No labels, no status tags)
Resolution Mechanism	Binary voting threshold or administrative approval	Direct physical action or natural thread abandonment
Post-Execution	Ticket archived; modifications require new petition	Thread remains open for maintenance & stewardship
System Overhead	High (Requires admins, moderators, tallying)	Zero (Self-describing text feed linked to a DOI)

3. OPERATIONAL MECHANICS IN THE PHYSICAL WORLD

In standard governance, physical intervention requires a proposal to be vetted, voted on, approved, and marked complete by an authority. Under the Perpetual Petition Protocol, execution occurs through **direct drift**—anyone with the desire to fulfill or alter a proposal simply acts, logging their activity directly to the DOI's ongoing thread.

Because there is no administrative gatekeeper, the petition serves as the transparent provenance log for the action, establishing local stewardship without bureaucratic friction.

LOCAL POND INSTALLATION	DOI: 10.1000/PPP.POND.08
Proposal: Anchor floating decoy object in public plaza water feature.	
Execution: Participants deploy tethered floating craft via monofilament line and concealed shore weight. Photos and rigging details are posted to the thread.	
Continuous State: The petition remains permanently live, receiving notes on structural wear, maintenance, or retrieval without needing new paperwork.
